

## **Digital Surveillance Services**

In our increasingly security conscious world, many organizations are seeking to upgrade, develop and improve their video security surveillance capabilities in order to efficiently manage and support their physical security monitoring systems.

By integrating audiovisual operations into secure Operations Centers enable personnel to monitor and respond to activity in real-time, as well as review, manage and analyze archived recordings. However, creating or updating a Security Surveillance System is complex and labour intensive. System Architecture, Logistical Planning, Implementation Processes and Daily Operations Support all have to be considered.

Mtell Digital Surveillance services guide organizations through every phase of design, planning, implementation and operation of digital surveillance solutions. Each solution is uniquely customized and based on an analysis of the client's current and future security requirements, existing surveillance environment, situational analysis and business drivers. Mtell considers each client's network infrastructure, storage capabilities, server capacity, application functionality, business needs and operational imperatives, technical, organizational and logistical issues.

Mtell Digital Surveillance solutions are proven superior. Our engagement methodology and technical consulting expertise, along with more than a decade of experience in the security industry, ensures that the Mtell digital surveillance solution delivered will be to your exact requirements.

### **Realize the Results**

- Substantially reduce the expenditures of maintaining your digital surveillance solution
- Expand surveillance capability and reliability
- Increase the flexibility of your surveillance system
- Automate and improve IT security remediation
- Comply with appropriate security standards and best practices within your industry
