

Information Risk Management

Mtell Information Risk Management solutions help organization establish and maintain data security. The right Information Risk Management plan can help your organization:

- Reduce risk
- Address compliance requirements
- Mitigate vulnerabilities
- Establish security processes based on industry standards and best practices

Risk Management is the effective management of security based on a thorough evaluation of the existing security controls and the implementation of industry-leading technologies and customized tools to employ effective controls. Mtell can identify your network infrastructure's exposure to internal and external security threats and develop a mitigation strategy that best aligns with your business objectives. We can address the business, technical and pragmatic security issues that may impact organizational security and achieve the level of security your organization needs.

Security Compliance is a comprehensive approach to addressing regulatory demands that identifies gaps in your security program, creates a plan to manage risk and implements practices that help you gain the most from your security investments.

Security Operations and Management helps you develop an effective security posture that supports simplicity, predictability and effectiveness in implementing processes, procedures and technical capabilities. Driving security governance processes helps you better predict the impacts of security investments. Our security consultants help you assess your current security, analyze your security needs, identify appropriate technologies and practices and properly design, implement and operate best-in-class protection for your IT infrastructure.

Managed Security Services provides your organization the skills and utilities you need, when you need them. Let Mtell help you maximize resource utilization, reduce costs and minimize risk, by providing you with dependable maintenance and management of your firewall systems. This ensures efficient, cost-effective support for security systems that require highly specialized knowledge and skills.
