

A SAN that saves more than data.

In data storage, TCO — total cost of ownership — covers much more than the cost of buying disk drives. It also includes management and maintenance costs, power consumption and cost of downtime.

MTell can provide you with the most innovative storage solutions capable of minimising these costs. Find out how your storage TCO stacks up in comparison with what we can provide:

- Reduce disk expenditures up to 74% by increasing usable disk capacity.
- Regain 40–60% of disk space that traditional storage loses to pre-allocation.
- More cost-efficiently manage active and inactive data.
- Dramatically reduce admin labour costs — manage more data in less time.
- Recover from disasters in minutes, not hours or days.
- Minimize the environmental impact of power and cooling.
